

## Minutes of the meeting of group 6

Project title: Group 06 Project

Meeting Purpose: Issue what people were going to initially look at.

People Present: Laura Collins, James Euesden, Jack Roden, Richard Addicott, Alex Hardy, Karl Birch, Chris Loftus, Michael Kitchen

People Absent: Shane Morgan

Place: C55

Date 4:10pm Tuesday 22<sup>nd</sup> October

Author: Alex Hardy

### Matters Arising

Still in action Richard and Karl to attend the GIT help.

Chris is in the group 06 mailing group and has joined the facebook group.

Android feedback – not too difficult and the workshop slides are online.

The photos of the group have been taken and emailed out.

Everyone has sent Chris their links to their blogs.

QA documents describe the layout, standards and information on what should be in the different documents we need to produce.

Shay needs to report back on the SE.QA.06

ACTION: shm22

Google maps can show us the places we have visited and plot points of these places. It can also show information about these places.

Open street got a map and Karl knows the library where we would be able to plot the points.

The server side is not android and there is no street view on open street map

Karl and James to produce a list of features for each of their respective map.

ACTION: jee22, kmb5

### Android design

At the moment Jack has an application that has two buttons but we need to add features to this. Need to decide on a basic GUI.

First core design idea was to have:

First Interface: Login page with user-name, password and a logo.

Second Interface: Start page with new tour, continue tour, manage your tours, and would have a drop down menu with settings and logout.

In the settings we would have the option of set course which is just GPS and find and course which uses roaming data, GPS and 4g.

If the user clicked the new button on the second interface it would bring up a screen which would allow the user to input the walk title, tag line, long description and cover photo.

Need to look at the platform we realise on. Phone or tablet or both.

Should be able to be used by android 2.3

Need to look at the requirements document to check that we tie in with all the functions that they require.

Need to think of a theme of the tour. Possible ideas already were fitness or scenic areas.

ACTION: ria4, kmb5, lac32, jee22, alh35, mjk5, shm22, jar55

#### Website Design.

Karl can up with an initial design. It had a title at the top of "Walking Tour Displayer". Below this was a map which has points on it of where the user has been. Below this the website was split in two. The left hand side had a search feature, which had name, landmarks, start and end. The right hand side showed the results and displays the start time, plots and the end time.

The group decided that they wanted to add a login section and logo to Karl's design.

#### Database

Laura looked at SQL and Postgresql. She decided that the information that we would have to store in the database is coordinates, title, photo, description and login details. Then pull the information to get it into the website.

#### New Business

The Deadline for the project plan is 5<sup>th</sup> November. How to do this project plan has been gone through in the lecture.

Laura is going to edit her project plan.

Need to assign who is going to write the project plan. Suggestions were made of Laura, Richard and Shane.

There are two examples of old project plans from the last two years on Blackboard. All should read these.

ACTION: ia4, kmb5, lac32, jee22, alh35, mjk5, shm22, jar55

Test specification deadline is the 11<sup>th</sup> November. There is a document SA.QA.06 which Alex and Michael should look at.

ACTION: mjk5, alh35

Laura to write the steps of the project task list.

#### AOB

No meeting on Thursday. Can communicate on facebook or by email if there are any problems.

Date minutes were produced: Wednesday 23<sup>rd</sup> October
